PERSONAL PROJECTS

IOT: Water Quality monitoring system

Embedded courses

Arduino-based system monitoring water turbidity and odor in real time, automatically controlling pump to ensure safe water quality. [🔗](#)

Sep 2023 - Jan 2024

Key Features

- Real-time monitoring of water quality
- Gas sensor-based odor detection
- Arduino-based automation with auto-shutdown safety
- Safety mechanism for automatic shutdown

Online FIR System

Sole Developer

A desktop FIR management system that allows users to register and track FIRs online. [🔗](#)

Sep 2021 - Feb 2022

Key Features

- Case tracking system
- Auto notification system for owner alerts
- Inter-city record synchronization
